

X19

DESCRIPTION

Originally designed for the practice of competitive coastal rowing the X19 combines stability and speed. Designed with competitive rowing in mind, its hull ensures exceptional fluidity. All the longitudinal and transverse lines that form the design in the submerged part of the hull, ensure to gain speed on calm water as well as on rough bodies of water. The addition of PVC or carbon reinforced bulkheads ensures more rigidity allowing a better hold of the boat for even more efficiency and responsiveness.

Designed for competitors looking for challenges, this boat comes in two versions (Club and Carbon) and meets the FISA regulatory specifications

Version Club

Wet production or with contact, Soric sandwich + expanded PVC, glass / epoxy, partitions and reinforcements

Version Carbone

Wet process or with contact, Soric sandwich + expanded Pvc, 100% carbon / epoxy, partitions and reinforcements 100% carbon
